Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cameron et al. (US/4,894,016) in view of R.T. Wheeler (US/3,321,985).

Cameron discloses method comprising the steps of: providing a first hole in the flywheel, providing a second hole in a stationary part of the engine to line up accurately with the hole in the flywheel once during each crankshaft revolution and inserting a locking pin into the aligned holes to lock the crankshaft in a predetermined angular position. However, does not detail how engine is turned over.

R. T. Wheeler discloses a method of manually cranking and engine for the purpose of setting engine timing. (col. 1, lines 7-16) The steps comprising removing the starter motor, mounting on the engine using the same fixings as the starter motor a manual cranking device having a cog that meshes with the teeth on the flywheel and that is secured to a shaft rotatable by means of a cranking handle, and rotating the flywheel by means of the cranking handle to position the flywheel. (col. 1, lines 39-43) However, Wheeler does not expressly disclose pinning the flywheel.

At the time of the invention it would have been obvious to one of ordinary skill to used the engine rotating invention of R.T. Wheeler too rotate the engine of Cameron. Motivation is stated in (col 1. lines 7-16) of Wheeler.

Allowable Subject Matter

3. Claims 3-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 5 and 6 are allowed.

Conclusion

5. The prior art made of record and not relied upon but considered pertinent to applicant's disclosure is listed in attached PTO-892.
